COMMERCIAL PROPOSAL // TIER II (FEATURED)

3D SPATIAL WEB & LIVING PBR SHADER REALITY

Real-Time WebGL / WebGPU Pipelines • 4D Molten Gold & Obsidian • Interactive Product Spatialization

Target Sector: Haute Horlogerie, Fine High Jewelry, Luxury Supercars, High-Tech Showcases	Timeline: 30 – 45 Business Days
Indicative Investment: €14,500 EUR Fixed	SLA & Sovereignty: 12 Months Dedicated SLA Included

1. EXECUTIVE SUMMARY & STRATEGIC MISSION

Tier II represents the pinnacle of modern web innovation: an interactive 3D spatial world executed entirely in-browser without external plugins. We deploy real-time WebGL and WebGPU shader engines featuring living molten metals, anisotropic gold foil, deep obsidian lacquer, physical glass caustics, and full 360° product configurators. Designed for luxury houses and technology pioneers seeking an unforgettable digital centerpiece.

2. ARCHITECTURAL STACK & PERFORMANCE ENGINE

3D Graphics Substrate	WebGL 2.0 / WebGPU Pipeline with Custom GLSL Shaders & Raymarching
Physical Material Shaders	Conductor Fresnel 24K Gold, Obsidian Piano Lacquer, Clearcoat Glass Caustics
Kinetic Physics & Audio	Spring Damping Physics, Spatial 3D Audio synthesis, Micro-Haptic Visual Feedback
Frame Budget & Optimization	Strict 60-120 FPS frame timing, dynamic resolution scaling, zero thermal throttling
Asset Compression Pipeline	Draco Mesh Geometry & KTX2 Texture compression for sub-second 3D model streaming
CMS & Asset Management	Headless CMS for effortless updates to 3D showcases, case studies, and media assets

3. SCOPE OF DELIVERABLES & CORE MODULES

01	**Full-Bleed 3D Living Background**	Procedural GPU fluid vortex, molten gold tendrils, floating mirror spheres with drop shadows.
02	**Interactive 3D Product Atelier**	Real-time 360° rotation, parts disassembly/explosion view, micron-level metal reflections.
03	**Cinematic Full-Page Transitions**	Seamless spatial transitions between sections without traditional page reloads.
04	**Curated Case Study Showcase**	Continuous autoplay 4K video cards, high-contrast typography, metrics HUD overlays.

05	**Bespoke Soundscape Integration**	Subtle, ultra-luxury interactive audio feedback designed to accompany touch & hover.
06	**Full Device Parity Guarantee**	Optimized fallback for low-power mobile GPUs ensuring zero stutter across all devices.

4. ROADMAP & DELIVERY PHASES

Phase 1: 3D Art & Shaders	12 Days	3D model topology optimization, custom GLSL shader synthesis, material look-dev.
Phase 2: Spatial Integration	18 Days	Interactive camera controls, Lenis scroll braiding, product configurator logic.
Phase 3: FPS Optimization	12 Days	GPU draw-call batching, multi-browser stress testing, edge deployment & training.

5. COMMERCIAL INVESTMENT & COMMISSION STRUCTURE

TOTAL FIXED INVESTMENT TIER	DEPLOYMENT TERMS
€14,500 EUR Equivalent: 28,360 BGN (Excl. VAT)	• 35% Initiation Advance • 35% Interactive Shader Alpha • 30% Final Edge Deployment

6. IP OWNERSHIP & SOVEREIGN GUARANTEES

100% Client Intellectual Property: Upon final milestone release, all source code, WebGL shaders, 3D assets, design systems, and documentation are transferred in full to the client without third-party vendor lock-in.
Zero Dependency Bloat: Hand-crafted architecture with 0 unnecessary npm bloat, guaranteed 100/100 Lighthouse performance, sub-second edge distribution, and guaranteed sub-16ms render frames (60-120 FPS).
Executive SLA: Includes dedicated priority engineering support, monthly security patches, and direct architectural concierge access.
