COMMERCIAL PROPOSAL // TIER III

SOVEREIGN ENTERPRISE HUD & HIGH-TECH TERMINAL

Full-Stack Sovereign Web Platform • Real-Time WebSockets • Post-Quantum Cryptography & High-Throughput Engine

Target Sector: Private Wealth Terminals, Biotech & Clinical Platforms, Decentralized Networks, Institutional Portals	Timeline: 60 – 90 Business Days
Indicative Investment: €38,000 EUR Fixed	SLA & Sovereignty: 24 Months Enterprise SLA Included

1. EXECUTIVE SUMMARY & STRATEGIC MISSION

Tier III is a sovereign mission-critical software portal engineered to enterprise defense-grade standards. Combining high-frequency WebSockets telemetry, dark obsidian HUD interface paradigms, cryptographic zero-knowledge authentication, and high-performance Rust/WASM or Go microservices. Tailored for family offices, private asset management, biomedical research institutions, and decentralized networks requiring absolute data sovereignty.

2. ARCHITECTURAL STACK & PERFORMANCE ENGINE

High-Speed Substrate	Rust Backend Engine with Actix-Web / Axum, WASM / WebGPU Frontend Acceleration
Real-Time Data Pipeline	Sub-millisecond WebSocket Telemetry, Redis In-Memory Ring Buffers, Zero-Copy WAL
Security & Cryptography	Post-Quantum Cryptography (ML-KEM / Dilithium), Mutual TLS, Hardware Key / Biometrics
Database & Persistence	TimescaleDB / RocksDB for microsecond historical time-series telemetry caching
Resilience & Sovereignty	Zero Third-Party Cloud Lock-In, Docker/Kubernetes or Bare-Metal Dedicated Deployment
Compliance & Hardening	SOC-2 Type II, GDPR, HIPAA-compliant encryption at rest and in transit

3. SCOPE OF DELIVERABLES & CORE MODULES

01	**Sovereign Multi-Node HUD**	Dark obsidian command portal with live streaming telemetry, interactive charts, and node health.
02	**Biometric / Cryptographic Auth**	Hardware key (FIDO2 / WebAuthn), Knox-grade security, enterprise role-based access control (RBAC).
03	**Real-Time Data Visualizer**	Dynamic WebGL/Canvas2D charts rendering 100,000+ data points at 60 FPS without UI freezing.

04	**Automated Reporting Engine**	Instant server-side vector PDF generation for executive statements, audit logs, and compliance.
05	**Full Penetration & Security Audit**	External vulnerability assessment, zero-day threat analysis, code freeze certification.
06	**Institutional White-Glove SLA**	24/7 critical incident response, redundant failover management, dedicated engineer hotline.

4. ROADMAP & DELIVERY PHASES

Phase 1: Security & Architecture	20 Days	System specification, cryptographic threat modeling, database schema & API contracts.
Phase 2: Core Engine & Telemetry	35 Days	High-throughput Rust/WebSocket service, WebGL dashboard rendering, auth layer.
Phase 3: Hardening, Audit & Go-Live	25 Days	Security penetration testing, failover drill, institutional handover & staff training.

5. COMMERCIAL INVESTMENT & COMMISSION STRUCTURE

TOTAL FIXED INVESTMENT TIER	DEPLOYMENT TERMS
€38,000 EUR Equivalent: 74,320 BGN (Excl. VAT)	• 30% Inception & Architecture • 30% Functional Core Alpha • 20% Beta & Security Audit • 20% Production Go-Live

6. IP OWNERSHIP & SOVEREIGN GUARANTEES

100% Client Intellectual Property: Upon final milestone release, all source code, WebGL shaders, 3D assets, design systems, and documentation are transferred in full to the client without third-party vendor lock-in.
Zero Dependency Bloat: Hand-crafted architecture with 0 unnecessary npm bloat, guaranteed 100/100 Lighthouse performance, sub-second edge distribution, and guaranteed sub-16ms render frames (60-120 FPS).
Executive SLA: Includes dedicated priority engineering support, monthly security patches, and direct architectural concierge access.
